

Cut fuel gas costs and work faster when you

Heat With Hi-Pressure Natural Gas

**Replace acetylene, propane and other fuel gases with high-pressure natural gas!
Natural gas is a superior low-cost fuel for pre-weld heating, bending and other tasks
and a G-TEC System will supply all the gas you need!**

When you need high volumes of gas for pre-weld heating a G-TEC Torch Booster eliminates cylinder valve icing problems and never runs out - no empty cylinders to change

One business tested high-pressure natural gas and Chemolene (tm) by running two torches on the same piece - after 30 minutes the high-pressure natural gas side was 120F hotter

When you heat with a G-TEC Torch Booster you never run out of gas!

A G-TEC Natural Gas Pressure Booster System connects to your building's utility natural gas line then boosts the pressure for high-performance and significant cost savings when compared to acetylene, propane and other cylinder gases. A G-TEC Pressure Booster lets you use your utility natural gas service to supply high-pressure natural gas at savings up to 80%.

Natural Gas Is The Best Fuel For Heating

- ◆ Natural gas has more BTUs in the secondary flame than other gases, heating a broader area of the work more quickly
- ◆ Natural gas can be used at any pressure - no 15 psi limit
- ◆ No valve icing problems with high gas flow rates

Natural Gas Saves Money

- ◆ Natural gas is the least expensive fuel per 100,000 BTUs
- ◆ Stop paying monthly cylinder rental and delivery charges
- ◆ Pay for fuel gas when you use it, not when you fill the tank - the gas utility has unlimited supply

Never Run Out / Never Change Fuel Gas Cylinders

- ◆ G-TEC Torch Boosters provide a constant supply of fuel gas - never run out in the middle of a big job
- ◆ Don't waste time storing, moving or changing empty gas cylinders

Natural Gas Is The Safest Fuel Gas

- ◆ Eliminate the hazards of propane - no cylinder storage problems, no bulk fuel tanks on your property
- ◆ Eliminate the dangers of acetylene - natural gas is stable and can be used at any pressure

G-TEC heating heads provide all the heat you need for pre-weld heating, bending, and other tasks
