

# Never M-T Refueler Systems

***It's like having a cylinder that never runs out of gas!***

G-TEC Never M-T Refueler Systems fill cylinders to 275 psi then, as gas is used, automatically restart to refill the cylinder and shut themselves off when the cylinder is full. The cycle repeats over and over without operator attention to provide a high-pressure, high-volume natural gas solution.

Never M-T Systems feature a variety of cylinder sizes and two Refueler capacities to meet your exact requirements.

## ***Multi-Cylinder Never M-T Systems***

Connect up to 4 G-TEC cylinders for as much as 130 scf of gas storage at pressures up to 275 psi. Use either Refueler 60 (60 scfh) or Refueler 180 (180 scfh) as the filling engine and any combination G-TEC Adsorbed Natural Gas cylinders.

## ***Single Cylinder Never M-T Systems***

When you use less high-pressure natural gas a single cylinder may provide sufficient storage and can be connected to a Refueler 60 or Refueler 180 with a Simple Tee that is securely mounted on the G-TEC cylinder. Single Cylinder Never M-T Systems work with all models of G-TEC cylinders.

**Refueler 60** - fills cylinders at a rate of 1 cf/min to 275 psi. Compact cabinet size is 20"W x 16"T x 18"D, weighs 75 lbs. and uses 120V 15 amp electric power.

**Refueler 180** - fills cylinders at a rate of 3 cf/min to 275 psi. Cabinet is 28"W x 20"D x 20"T, weighs 175 lbs. and uses 120V 20 amp electric power.

**G-TEC Cylinders** are available in 130 cf, 45 cf and 14 cf sizes and are approved by the US DOT and Transport Canada.

*G-TEC Refuelers and cylinders do not need special site preparation and can be installed "anywhere" in accordance with local codes.*
